Introduction

This is a release of firmware for the CRS-300 Switch system for operation with CDM-710 modems.

Features

- A front panel menu feature has been added to prompt the user to select whether or not to copy the RM configuration to a TM that is being manually bridged. This facilitates placing a TM offline (by manually backing it up), changing its configuration or replacing it, and then placing the TM online (by manually bridging it), without disturbing the new configuration.

Issues Addressed In This Release

- Fixed an issue where the RM would be placed online if Switch lost comms with bridged RM.
- The RM is now allowed to be placed online with a Tx fault if the bridged TM has all three (Tx, Rx, and Unit) faults.

Known Issue(s) In This Release

None.
