Introduction

This is a release of firmware for the CRS-300 Switch system for operation with SLM-5650, SLM-5650A modems.

Features Added

Added a front panel menu feature to confirm copying modem configuration from the Redudant Modem to the backed-up Traffic Modem that is being placed back online in Manual mode.

Issues Addressed

1) Fixed a potential communications port lockup that could be caused by a remote command received with more than one CR (ASCII 0x0d) characters in a row.
2) Fixed an issue regarding backing up a faulted Traffic Modem when in Auto mode and a Priority Modem is specified and is not faulted.
3) Allow Redundant Modem to go online with a Tx fault when the bridged Traffic Modem has all 3 faults (Tx, Rx, and Unit).

Known Issues

None.
