CDM-625A-ENI Advanced Satellite Modem

Overview

The CDM-625A-ENI Advanced Satellite Modem builds on our legacy of providing the most efficient and reliable satellite modems. With support for VersaFEC[®] Forward Error Correction (FEC), the revolutionary DoubleTalk[®] Carrier-in-Carrier[®] and additional rolloffs, the CDM-625A-ENI provides significant savings under all conditions. This combination of advanced technologies enables multi-dimensional optimization, allowing satellite communications users to:

- Minimize operating expenses (OPEX)
- Maximize throughput without using additional transponder resources
- Maximize availability (margin) without using additional transponder resources
- Minimize capital expenses (CAPEX) by allowing a smaller BUC/HPA and/or antenna
- · Or, a combination to meet specific business needs

Features

- DoubleTalk Carrier-in-Carrier bandwidth compression
- Carrier-in-Carrier Automatic Power Control
- VersaFEC-2 High Performance LDPC with Adaptive Coding and Modulation (ACM), Short Block and Long Block
- VersaFEC FEC with Adaptive Coding and Modulation (ACM)
- 5%, 10%, 15%, 20%, 25% and 35% Filter Rolloff
- Integrated 4-port managed Ethernet switch with VLAN and QoS
- Jumbo frame support
- Dual Band Capability: 70/140 MHz and extended L-Band (950 – 2250 MHz) in same unit
- Data Rate: 18 kbps to 25 Mbps
- Symbol Rate: 18 ksps to 12.5 Msps
- Modulation: BPSK, QPSK/OQPSK, 8PSK/8-QAM/8-ARY, 16-QAM/16-ARY, 32-ARY
- FEC: Viterbi, Sequential, Concatenated Reed Solomon, TCM, Turbo Product Code (TPC) (IESS-315 Compliant), LDPC Code, VersaFEC (low-latency LDPC) and VersaFEC-2 (high performance LDPC)
- Widest Range of data interfaces: EIA-422/530, V.35, G.703 T1, G.703 E1, G.703 T2, G.703 E2, Quad G.703 E1, ASI, LVDS, HSSI, 4-port 10/100Base-T Ethernet

Typical Users

- Mobile Network Operators
- Telecom Operators
- Satellite Service Providers
- Government & Military
- Enterprise
- Offshore

Common Applications

- Mobile Backhaul
- G.703 Trunking
- IP Trunking
- Offshore & Maritime Communications
- Enterprise
- Communications on-the-Move
- Satellite News Gathering
- Sub Mux to multiplex IP/Ethernet traffic with serial or G.703
 traffic
- Drop & insert for T1/E1
- Enhanced D&I++ for single T1/E1 & quad E1
- Management: 10/100Base-T Ethernet with SNMP V2 and V3, Distant End SNMP Proxy, HTTP, Telnet and EIA-232/EIA-485
- RADIUS Client
- Carrier ID using MetaCarrier[®] Technology
- Embedded Distant-end Monitor and Control (EDMAC)
- Automatic Uplink Power Control (AUPC)
- Engineering Service Channel (ESC/ESC++)
- Standard high-stability internal reference (± 6 x 10-8)
- 5-tap Adaptive Equalizer
- L-Band TX: 10 MHz reference for BUC, FSK communications and optional BUC power supply
- L-Band RX: 10 MHz reference and LNB power supply
- L-Band: Advanced FSK for LPOD M&C
- 1:1 and 1:10 redundancy switches available
- Backwards compatible with CDM-625

Doubletalk Carrier-in-Carrier

DoubleTalk Carrier-in-Carrier, based on patented "Adaptive Cancellation" technology, allows transmit and receive carriers of a duplex link to share the same transponder bandwidth. DoubleTalk Carrier-in-Carrier is complementary to all advances in modem technology, including advanced FEC and modulation techniques. As these technologies approach theoretical limits of power and bandwidth efficiencies, DoubleTalk Carrier-in-Carrier utilizing advanced signal processing techniques provides a new dimension in bandwidth efficiency.

Figure 1 shows the typical full-duplex satellite link, where the two carriers are adjacent to each other.

Figure 2 shows the typical DoubleTalk Carrier-in-Carrier operation, where the two carriers are overlapping, thus sharing the same spectrum.

When observed on a spectrum analyzer, only the Composite is visible. Carrier 1 and Carrier 2 are shown in Figure 2 for reference only.

As DoubleTalk Carrier-in-Carrier allows equivalent spectral efficiency using a lower order modulation and/or code rate, it can reduce the power required to close the link thereby reducing CAPEX by allowing a smaller BUC/Amplifier and/or antenna. Alternatively, DoubleTalk Carrier-in-Carrier can be used to achieve very high spectral efficiencies E.g., DoubleTalk Carrier-in-Carrier when used with 16-ARY modulation approaches the bandwidth efficiency of 256-ARY (8 bps/Hz).

When combined with VersaFEC-2 or VersaFEC and optimized transmit filter rolloff, it can provide unprecedented savings in transponder bandwidth and power utilization. This allows for its successful deployment in bandwidth-limited and power-limited scenarios, as well as reduction in earth station BUC/HPA power requirements.

Carrier-in-Carrier® is a Registered Trademark of Comtech EF Data

DoubleTalk® is a Registered Trademark of Raytheon Applied Signal Technology VersaFEC® is a Registered Trademark of Comtech EF Data

Carrier-in-Carrier Automatic Power Control (CnC-APC)

The patent-pending Carrier-in-Carrier Automatic Power Control (CnC-APC) mechanism enables modems on both sides of a CnC link to automatically measure and compensate for rain fade while maintaining the Total Composite Power. In addition to automatically compensating for rain fade, CnC-APC also enables the modems to share link margin, i.e. a modem in clear sky conditions can effectively transfer excess link margin to a distant end modem experiencing fade, thereby further enhancing overall availability.

VersaFEC-2 High Performance LDPC Forward Error Correction

CDM-625A-ENI offers a new high performance LDPC FEC specifically design to optimize performance at low and mid-tier symbol rates. VersaFEC-2 long-block provides 38 ModCods (BPSK to 32-ARY) with performance generally better than DVB-S2 at significantly lower latency and short-block provides 36 ModCods (BPSK to 32-ARY) with higher coding gain than first generation VersaFEC and similar latency. All higher order constellations are quasi-circular for optimal peak-to-average performance. Both CCM and ACM operation is support for long block and short block.

VersaFEC Forward Error Correction

CDM-625A-ENI offers VersaFEC, a patent-pending system of high-performance LDPC codes designed to provide maximum coding gain while minimizing latency. VersaFEC is designed to support ACM and CCM mode of operation

The Ultra Low Latency (ULL) codes provide even lower latency compared to standard VersaFEC codes.

Adaptive Coding & Modulation (ACM)

Satellite users have traditionally relied on worst case link margin to overcome rain fade which leads to significant inefficiencies. ACM can provide significant increase in throughput as well as availability. ACM converts the fade margin into increased capacity making it possible to more than double the throughput for Ku-band operation. Even under deep fade, ACM may be able to maintain the link at the lower MODCOD thereby increasing availability. It is tightly integrated with packet processor QoS which allows higher priority, mission critical traffic to be maintained even during fade.

Low Density Parity Check Codes (LDPC) & Turbo Product Codes (TPC)

CDM-625A-ENI offers an integrated LDPC and 2nd Generation TPC codec. LDPC is an advanced Forward Error Correction technique capable of providing performance much closer to Shannon limit. The current LDPC implementation can provide 0.7 to 1.2 dB additional coding gain compared to an equivalent TPC code.

In order to take full advantage of the increased coding gain provided by LDPC, Comtech EF Data has developed a patented 8-QAM modulation that allows for acquisition and tracking at much lower Eb/No compared to 8PSK.

Dual Band Capability

CDM-625A-ENI supports 70/140 MHz and extended L-Band (950 – 2250 MHz) capability in the same unit with independently selectable transmit and receive IF. This simplifies sparing and stocking in networks requiring 70/140 MHz and L-Band units.

4-Port Managed Ethernet Switch with VLAN & QoS

CDM-625A-ENI incorporates a 4-port 10/100Base-T managed Ethernet switch with VLAN capability and priority-based Quality of Service. Access (Native) Mode and Trunk Mode are supported. Traffic can be prioritized using port-based priority or VLAN priority. The modem supports jumbo frames with maximum Ethernet frame size of 2048 bytes.

Quad E1 Interface (QDI) with Enhanced D&I++

The CDM-625A-ENI supports a Quad E1 interface that can aggregate up to four full or fractional E1s into a single carrier, with very low overhead. This provides significant CAPEX savings by reducing the number of modems and could possibly reduce the BUC/HPA size by eliminating the multi-carrier backoff. A proprietary, closed network drop & insert (D&I++) allows for dropping or inserting any combination of 1 to 31 time slots on each E1. D&I++ is supported for E1-CCS only.

IP Sub Multiplexer

The IP sub mux allows multiplexing IP/Ethernet traffic with serial or G.703 traffic into a single carrier. This is particularly useful for cellular backhaul when both E1 and IP backhaul is required. This reduces the number of modems and could possibly reduce the BUC/HPA size by eliminating the multi-carrier backoff. The IP sub mux ratio ranges from 9:1 (IP data rate is 9 times that of the serial or G.703 data rate) to as low as 1:59. IP sub mux can also be used to provision an overhead IP channel for management when using non IP/Ethernet traffic interfaces.

EDMAC & AUPC

The CDM-625A-ENI supports EDMAC, EDMAC-2, EDMAC-3 and AUPC. EDMAC/EDMAC-2/EDMAC-3 can be used to monitor and control the distant end of a satellite link using a proprietary overhead channel. EDMAC-3 is also used for SNMP management of the distant end modem. AUPC automatically adjusts modem transmit power based on feedback from the distant end modem to maintain the desired Eb/No. AUPC and EDMAC are supported for point-to-point duplex links.

Management & SNMP Proxy

The modem can be managed via the front panel, the remote M&C port (EIA-232/EIA-485), or the 10/100Base-T Ethernet port. With support for SNMP V2 and V3, HTTP and Telnet, the modem can be easily integrated into an IP-based management system. The CDM-625A-ENI can also act as SNMP proxy for the distant end CDM-625A-ENI. This allows distant end CDM-625A-ENI management using SNMP without requiring an end-to-end IP link.

RADIUS Client

The CDM-625A-ENI supports the Remote Authentication Dial In User Service (RADIUS) client enabling centralized user authentication for management access to the modem by web browser and telnet. RADIUS client supports Password Authentication Protocol (PAP) and Challenge-Handshake Authentication Protocol (CHAP).

Advanced FSK for LPOD Monitoring & Control

The Advanced FSK allows for monitoring and control of LPOD through modem front panel menus, serial remote control and Telnet.

		-63.0 100 Hz
-83.0 10 kHz		-73.0 1 kHz
		-83.0 10 kHz

	-93.0 100 kHz Fundamental AC line spurious is -42 dBc or
	lower The sum of all other single sideband spurious,
	from 0 to 0.75 x symbol rate, is -48 dBc or lower
Output Power	50-180 MHz: 0 to -25 dBm, 0.1 dB steps
	950-2250 MHz:
Power Accuracy	0 to -40 dBm, 0.1 dB steps 50-180 MHz:
,	\pm 0.5 dB over frequency, data rate, modulation type and temperature range of 15 to 35° C \pm 0.8 dB over frequency, data rate, modulation type and temperature range of 0 to 50° C 950-2250 MHz: \pm 0.7 dB over frequency, data rate, modulation
	type and temperature range of 15 to 35° C \pm 1.0 dB over frequency, data rate, modulation
Output Impedance &	type and temperature range of 0 to 50° C 50-180 MHz: 50 Ω /75 Ω , 16 dB minimum
Return Loss	return loss (18 dB typical), BNC connector 950-2250 MHz: 50 Ω , 19 dB minimum return loss
Clocking Options	(21 dB typical), Type-N connector Internal, ± 0.06 ppm (SCT)
Clocking Options	External, locking over a ± 100 ppm range (TT) Loop timing (RX satellite clock) – supports asymmetric operation
External TX Carrier	External clock By TTL 'low' signal or external contact closure
Off BUC Reference	Via TX IF center conductor, 10.0 MHz
(10 MHz)	\pm 0.06 ppm (with internal reference), selectable on/off, 0.0 dBm \pm 3 dB
BUC Power Supply	24 VDC, 4.17 Amps max., 90 W @ 50° C
(HW Option)	48 VDC, 3.125 Amps max., 150 W @ 50° C (180 W @ 30° C) Supplied through TX IF center conductor and selectable on/off via M&C control
Demodulator	
Input Power Range,	50-180 MHz: -105 + 10 log (symbol rate) to
Desired Carrier	-70 + 10 log (symbol rate) dBm 950-2250 MHz: -130 + 10 log (symbol rate) to - 80 + 10 log (symbol rate) dBm
Max Composite	50-180 MHz:
Operating Level	94 – 10 log (symbol rate, desired carrier) dBc, +10 dBm max., with the additional requirement that within \pm 10 MHz of the desired carrier the composite power is \leq +30 dBc 950-2250 MHz:
	$102 - 10 \log$ (symbol rate, desired carrier) dBc, +10 dBm max., with the additional requirement that within ± 10 MHz of the desired carrier the composite power is \leq +30 dBc
Absolute Maximum	+20 dBm
Adaptive Equalizer	5-tap design, selectable on/off
Acquisition Range Below 64	Programmable in 1kHz increments \pm 1 kHz to \pm (Rs/2) kHz, where Rs = symbol rate
ksymbols/sec	in ksymbols/sec
Between 64 and 389 ksymbols/sec	\pm 1 kHz to \pm 32 kHz
Above 389	\pm 1 kHz to \pm (0.1 * Rs) kHz, up to a maximum of
ksymbols/sec Acquisition Time	± 300 kHz Highly dependent on data rate, FEC rate, and
·	demodulator acquisition range. E.g. 120 ms average at 64 kbps, R1/2 QPSK, ± 10 kHz acquisition sweep range, 6 dB Eb/No
Plesiochronous/	Selectable from 64 to 262,144 bits, in 16-bit
Doppler Buffer	steps (Additional limitations for G.704 frame boundaries)
Receive Clock	RX satellite, TX terrestrial, external reference
Clock Tracking	± 100 ppm minimum

LNB Reference (10 MHz)	Via RX IF center conductor, 10.0 MHz ± 0.06 ppm (with internal reference), selectable on/off, -3.0 dBm ± 3 dB
LNB Voltage	Selectable on/off, 13 VDC, 18 VDC per DiSEq 4.2 and 24 VDC at 500 mA maximum
Monitor Functions	Eb/N0 estimate, corrected BER, frequency offset, buffer fill state, receive signal level

DoubleTalk Carrier-in-Carrier

Double lain Gaine in	
Delay Range	0 to 330 ms
Power Spectral Density	BSPK/QPSK/8PSK/8-QAM: -7 dB to +11 dB
Ratio	16-QAM: -7 dB to +7 dB
(Interferer to Desired)	
Maximum Symbol Rate Ratio	3:1 (TX:RX or RX:TX)
Eb/No Degradation	0 dB Power Spectral Density Ratio
5	BPSK/QPSK/OQPSK: 0.3 dB
	8-QAM: 0.4 dB
	8PSK: 0.5 dB
	8-ARY: 0.4 dB
	16-QAM: 0.6 dB
	16-ARY; 0.6 dB
	32-ARY: 0.6 dB
	+10 dB power spectral density ratio
	Additional 0.3 dB
Satellite Restrictions	Satellite in "loop-back" mode (i.e., the
	transmit station can receive itself)
	"Non-processing" satellite (i.e., does not
	demodulate or remodulate the signal)

Available Options

Hardware	100 – 240 VAC, 120 W AC primary power supply
Hardware	-48 VDC, 125 W primary power supply
Hardware	-24 VDC, 120 W primary power supply
Hardware	24 VDC, 90 W @ 50°C BUC power supply, AC, 24 VDC or 48 VDC primary power supply
Hardware	48 VDC, 150 W @ 50°C (180 W @ 30°C) BUC power supply, AC or 48 VDC primary power supply
Hardware	VersaFEC-2 Codec module
Hardware	Integrated TPC (2nd generation) and LDPC Codec module
FAST	L-Band IF (in addition to 70/140 MHz)
FAST	Modem data rate – 10 Mbps, 15 Mbps, 20 Mbps or 25 Mbps
FAST	8PSK and 8-QAM modulation (8-QAM requires TPC/LDPC or VersaFEC Codec)
FAST	16-QAM modulation
FAST	TPC/LDPC Codec data rate – 10 Mbps, 15 Mbps, 20 Mbps or 25 Mbps

FAST		e DoubleTalk Carrier-in-Carrier Feature
FAST		Talk Carrier-in-Carrier Data Rate (full) – 512 kbps, ps, 2.5 Mbps, 5 Mbps, 10 Mbps, 15 Mbps, 20 Mbps
FAST	Double	Talk Carrier-in-Carrier Data Rate (fractional) – 2.5 5 Mbps, 10 Mbps, 15 Mbps, 20 Mbps or 25 Mbps
FAST	VersaF	EC Codec data rate (CCM) – 1.1 Mbps, 2.5 Mbps,
FAST		r 16 Mbps EC Codec symbol rate (ACM) – 300 ksps, 1.2 Msp
FAST	or	
FAST	4.1 Ms	etwork – IBS with high rate IBS ESC, IDR and audi
FAST		&I++ for single Port T1/E1
FAST		For Quad E1 Port 2, 3 and 4
FAST		EC-2 Codec data rate (CCM) – 5 Mbps, 10 Mbps,
	15 Mbp	s, 20 Mbps or 25 Mbps
FAST		EC-2 Codec symbol rate (ACM) – 1.2 Msps, 2.0 4.1 Msps, 8.0 Msps or 12.5 Msps
