Introduction

The main purpose of this latest release of CRS-200 firmware, version 1.10, is to change the Switch monitoring command away from the command that might be utilized by external M&C applications.

New Features

- None.

Issues Addressed In This Release

- The Switch message that was used to monitor the modems was changed. It used to be FLT? however this might also be used by external M&C applications. A duplicate command was added to the modem software for the CRS Switch to use exclusively. This preserves the modem flag: change-of-configuration that is so essential for Switch operation.

Known Issue(s) In This Release

None known.
